Adding Dense Layers

Date	29 October 2022
Team ID	PNT2022TMID45471
Project Name	AI-powered Nutrition Analyzer for FitnessEnthusiasts

A dense layer is a deeply connected neural network layer. It is the most common and frequently used layer.

```
# Adding a fully connected layer
classifier.add(Dense(units=128, activation='relu'))
classifier.add(Dense(units=5, activation='softmax')) # softmax for more than 2
```

The number of neurons in the Dense layer is the same as the number of classes in the training set. The neurons in the last Dense layer, use softmax activation to convert their outputs into respective probabilities.

Understanding the model is a very important phase to properly using it

```
classifier.summary()#summary of our model
```

```
Model: "sequential"

```

for training and prediction purposes. Keras provides a simple method, a summary to get the full information about the model and its layers.
